

# Earl Road Flood Control Facility

michigan city, indiana

Owner: Sanitary District of Michigan City, Indiana  
Contact: Mr. John Pugh

Client: Tonn & Blank Construction  
Contact: Mr. Brian Delich

Year: 2005  
Project: Earl Road Flood Control Facility  
Project Type: Installation

Williams Creek Management provided natural resource construction services for a regional flood control facility in Michigan City, Indiana. The site is designed to manage regional stormwater quantity and improve water quality control during peak flows. The facility also serves the dual purpose of passive recreation while creating the opportunity to demonstrate the need to manage non-point source pollutants prior to discharge in to Lake Michigan. Specific services provided include:

- Finish grading
- Installation of rockwork
- Installation of 47 acres of native seed
- 2.5 acres of composite turf mat for erosion control
- Installation of 188 native trees ranging from 2" - 3" caliper
- Installation of 704 native shrubs
- Installation of 19,000 wetland plugs
- Installation of 450 liner stock native trees
