

# Lebanon Business Park

boone county, indiana

Client: Duke Realty Corporation  
Contact: Mr. David Fronek

Year: 2005  
Project: Lebanon Business Park Stream Mitigation  
Project Type: Installation

As part of stream restoration, Williams Creek Management offers specialty stream relocation services. In many cases, stream relocation involves the movement of a streambed to a new location, allowing an authorized project to be constructed in the stream's former location.

Williams Creek Management develops innovative solutions for minimizing stream impacts and reducing mitigation costs. Williams Creek Management provides ecological construction management to ensure that projects are constructed with the highest quality and attention to detail. Extensive experience and specialty installation services are provided by Williams Creek Management to deliver superior, client-focused contracting expertise.

Williams Creek Management relocated approximately 2,100 linear feet of stream at the Lebanon Business Park located in Lebanon, Boone County, Indiana. The stream mitigation included:

- Installation of approximately two acres of native prairie grasses,
- over seven acres of temporary field grass,
- 72 upland trees, and;
- 190 coconut fiber erosion control blankets

Williams Creek Management also restored approximately three acres of native forest and planted 72 - 1 1/2" caliper trees on the northwest side of the stream bank and installed a slope stabilization seed mix in conjunction with compost to better stabilize the slope.
