

CITY OF WESTFIELD LIBERTY PARK

Total Project Delivery: Construction, Installation & Preservation

OWNER: City of Westfield

CLIENT: Kite Realty Group Trust

LOCATION: Westfield, Indiana

YEAR: 2009 - 2014

The City of Westfield Parks Department utilized land from an approximately 2-acre wetland mitigation site as a passive wetland park. Williams Creek Management provided design/build services for the park, which was developed with the intent of natural flood control and water quality improvement for Cool Creek. The project was privately funded by a local developer due to federally regulated wetland impacts.

Liberty Park was designed to allow floodwater from Cool Creek to enter the wetland, providing a place for sediment deposition, nutrient removal through the wetland anaerobic processes, and possible connection of fragmented ecological habitats that would allow for the re-establishment of valuable wildlife corridors.

Williams Creek provided turnkey wetland mitigation construction, installation, and long-term preservation services.

Market Served: Government (Parks & Recreation)
