

MSDGC GREEN INFRASTRUCTURE MAINTENANCE

Total Project Delivery: Installation & Preservation

OWNER: Metropolitan Sewer District of Greater Cincinnati

CLIENT: Metropolitan Sewer District of Greater Cincinnati

LOCATION: Cincinnati, Ohio

YEAR: 2016 - Present

Since 2016, Williams Creek has partnered with MSDGC to perform maintenance and inspection services at up to 15 Green Infrastructure (GI) sites including debris and invasive plant removal, erosion control and repair, stormwater structure cleaning, mulching and plant replacement activities. Follow-up inspection activities have also included infiltration testing, sediment removal plan development and implementation, re-planting recommendations on installation based on the performance indicators previously developed.

As part of MSDGC's commitment to wet weather management and its Wet Weather Improvement Plan, Williams Creek provides weekly GI maintenance activities to help ensure the water quality and neighborhood beautification benefits are being met. In addition to the GI maintenance activities, we have provided installation services focused on design/build approach to retrofit existing systems in need of attention.

Williams Creek team members utilize performance indicators during maintenance and inspection activities to help reduce operations and future capital costs associated with the Wet Weather Improvement Plan while helping MSDGC keep its commitment to the community.

Market Served: Government (Public Works)
